ABOUT

Continuously learning and highly motivated frontend engineer with solid experience in building scalable web applications. Experienced in integrating third-party services, designing efficient state management solutions, and optimizing performance in production environments. Comfortable working across the full development lifecycle - from implementing UI components to collaborating on backend integrations. Focused on writing maintainable, high-quality code and continuously improving development processes.

SKILLS

- **Programming languages:** JavaScript, TypeScript, HTML5, CSS3
- **Frameworks**: React, Next.js, Vue (Composition API, Options API)
- **State Management & Libraries**: Redux, Pinia, Vuex
- **Architecture**: Microfrontends, Monorepos (NX/Turbo), Scalable Architecture
- **UI & Visualization**: Material UI, Vuetify, Framer Motion, AG Grid
- **Backend & APIs:** Node.js, REST APIs, OAuth2
- **Testing**: Jest, Vitest, Cypress, Playwright
- **Build & Tooling:** Webpack, Vite, Babel
- **DevOps & Infrastructure**: Docker, Kubernetes, Jenkins, CI/CD (GitLab, GitHub Actions)
- **Cloud & Services:** AWS, GCP, Firebase, Firestore
- **Databases**: MongoDB
- **Code Quality**: CI/CD (Linter checks), ESLint, Prettier, Stylelint.
- **Performance**: Performance Optimization, Web Vitals, Code Splitting
- **Other Tools:** Postman

EXPERIENCE

Grid Dynamics - Middle Frontend Engineer 2024-2026

Worked on an order management system for a global sportswear company, focused on optimizing operational workflows and improving internal tooling efficiency. Contributed as a frontend engineer across the full development lifecycle, with emphasis on performance, scalability, and system reliability.

Key Contributions:

- **Performance Optimization**: Significantly improved application responsiveness by implementing Code Splitting, Lazy Loading, and large-scale library refactoring. Successfully reduced LCP from 8s to 3.5s and FCP from 4s to 2.8s, optimizing the overall bundle size and user experience.
- **Architecture & Scalability:** Architected and migrated the frontend to a Monorepo (NX) from scratch, consolidating 4+ applications into a unified platform.
- **Engineering Standards & CI/CD:** Streamlined the delivery pipeline by switching to tag-driven deployments and GitHub Releases, providing granular control over code quality and versioning for every feature branch.
- **Production Excellence:** Actively involved in production support and incident resolution (PagerDuty), ensuring high reliability for a global user base.

Responsibilities:

- Developed scalable frontend solutions using Vue and TypeScript.
- Integrated internal and third-party APIs to support complex order workflows.
- Collaborated with Product Owners and Stakeholders to refine requirements and conduct demos.
- Implemented automated testing (Unit, Integration, E2E) to ensure regression-free releases.
- Configured and maintained CI/CD pipelines (Jenkins).

Technologies:

Vue Pinia Vuex NX Vite TypeScript Vitest Cypress Playwright Jenkins AWS

Grid Dynamics - Junior Frontend Engineer 2024

E-commerce

Contributed to the modernization of supply chain and e-commerce systems for a major US retailer, focusing on improving application reliability and maintainability.

Responsibilities:

- Developed and maintained frontend features using React and TypeScript
- Ensured high test coverage (up to 100% for owned modules)
- Participated in code reviews and Agile processes
- Integrated APIs and supported application lifecycle (development → testing → deployment)

CERTIFICCATES

- **AWS Associate**: Solutions Architect
- **GCP** - Cloud Digital Leader
- GCP: Generative AI Fundamentals
- Prompt engineering and building applications with LLMs

LANGUAGE

- English
- Russian
- Armenian
- Ukrainian
- Polish

Grid Dynamics - Intern Frontend Engineer 2023

Contributed to the development of interactive web applications, including a map-based analytics tool and e-commerce interfaces (home, product listing, product details, cart). Worked in a small team with close mentorship, gaining hands-on experience in modern frontend development.

Responsibilities:

- Developed responsive UI components using React and TypeScript
- Integrated map-based features using React Leaflet
- Wrote unit tests and maintained high test coverage
- Participated in sprint planning, demos, and backlog refinement
- Set up CI/CD pipelines and automated deployment (Firebase Hosting)
- Collaborated on code reviews and followed clean code practices
