ABOUT ME

Frontend Engineer with hands-on experience building scalable, high-performance web applications using JavaScript and TypeScript.
Proven track record of improving application performance (Core Web Vitals), designing maintainable frontend architectures, and contributing to large-scale production systems.
Comfortable working across the full development lifecycle, from implementation and testing to deployment and production support.

SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3

Frameworks: React & Next.js, Vue (Composition/Options API)

State Management: Redux, Pinia, Vuex

Architecture: Microfrontends, Monorepos (NX, Turborepo), Scalable Design Patterns

Infrastructure & DevOps: Docker, Kubernetes, Jenkins, CI/CD (GitHub Actions, GitLab CI), Tag-driven Deployment

Backend & API: Node.js, RESTful APIs, OAuth2, JWT

Testing: Jest, Vitest, Cypress, Playwright

Build Tools: Vite, Webpack, Babel

UI & Visualization: Material UI, Vuetify, Framer Motion, AG Grid

Quality & Performance: Web Vitals, Performance Optimization, Code Splitting, ESLint, Prettier, Stylelint

AI Tools: GitHub Copilot, OpenAI APIs, Cursor

Databases: MongoDB

WORK EXPERIENCE

2024-2026

Grid Dynamics — Frontend Engineer

Worked on an order management system for a global sportswear company, focused on optimizing operational workflows and improving internal tooling efficiency. Contributed as a frontend engineer across the full development lifecycle, with emphasis on performance, scalability, and system reliability. Improved application performance leading to better user experience and positive client feedback

Key Contributions:

- **Performance Optimization:** Significantly improved application responsiveness by implementing Code Splitting, Lazy Loading, and large-scale library refactoring. Successfully reduced LCP from 8s to 3.5s and FCP from 4s to 2.8s, optimizing the overall bundle size and user experience.
- **Architecture & Scalability:** Architected and migrated the frontend to a Monorepo (NX) from scratch, consolidating 4+ applications into a unified platform. This streamlined cross-team collaboration and boosted development speed.
- **Engineering Standards & CI/CD:** Streamlined the delivery pipeline by switching to tag-driven deployments and GitHub Releases, providing granular control over code quality and versioning for every feature branch.
- **Production Excellence**: Actively involved in production support and incident resolution (PagerDuty), ensuring high reliability for a global user base.

Responsibilities:

- Developed scalable frontend solutions using Vue and TypeScript.
- Integrated internal and third-party APIs to support complex order workflows.
- Collaborated with Product Owners and Stakeholders to refine requirements and conduct
- demos.
- Implemented automated testing (Unit, Integration, E2E) to ensure regression-free releases.
- Configured and maintained CI/CD pipelines (Jenkins).

CERTIFICCATES

- **AWS Associate:** Solutions Architect
- **GCP** - Cloud Digital Leader
- GCP: Generative AI Fundamentals
- Prompt engineering and building applications with LLMs

LANGUAGE

- English
- Russian
- Armenian
- Ukrainian
- Polish

Technologies:
TypeScript, Vue, Pinia, VueX, NX, Vite, Vitest, Cypress, Playwright, Jenkins, AWS

2023-2024

Grid Dynamics — Frontend Engineer (E-commerce)

Contributed to the modernization of supply chain and e-commerce systems for a major US retailer, focusing on building scalable and maintainable frontend solutions.

Key Contributions:

- **Frontend Architecture & Ownership:** Designed and developed a complex e-commerce application from scratch using React and TypeScript, taking ownership of the full development lifecycle from architecture design to production deployment.
- **Design System & UI Consistency:** Built a reusable internal UI library using Storybook and scalable styling approaches, ensuring consistency across multiple application modules.
- **Quality & Testing Strategy:** Established high engineering standards by implementing comprehensive unit testing with Jest, achieving up to 100% test coverage for critical modules.
- **Performance & Maintainability**: Improved application structure and maintainability through modular component design and optimized state management patterns. Optimized rendering performance and reduced unnecessary re-renders

Responsibilities:

- Developed and maintained scalable frontend features using React, TypeScript, and Next.js
- Implemented reusable, well-structured components aligned with modern React patterns
- Managed application state using Redux, ensuring predictable data flow
- Integrated RESTful APIs and handled complex asynchronous data flows
- Collaborated in Agile environment, participating in code reviews, planning, and demos
- Ensured high code quality through testing, linting, and best practices

Technologies:
TypeScript, React, Next.js, Redux, Material UI, Jest, Storybook, Jenkins, GCP

2023

Grid Dynamics — Intern Frontend Engineer

Contributed to the development of interactive web applications, including a map-based analytics tool and e-commerce interfaces (home, product listing, product details, cart). Worked in a small team with close mentorship, gaining hands-on experience in modern frontend development.

Responsibilities:

- Developed responsive UI components using React and TypeScript
- Integrated map-based features using React Leaflet
- Wrote unit tests and maintained high test coverage
- Participated in sprint planning, demos, and backlog refinement
- Set up CI/CD pipelines and automated deployment (Firebase Hosting) Collaborated on code reviews and followed clean code practices

Technologies:

TypeScript, React, Redux, Jenkins, React Leaflet, FIreStore, FireBase
